

191	28. Algebraic cycles on complex varieties
201	Part 5. Topological techniques and applications
201	29. The Atiyah-Hirzebruch spectral sequence
217	30. Operations on $K$ -theory
224	31. The Hopf invariant one problem
236	32. Calculation of $KO$ for stunted projective spaces
252	33. Solution to the vector field problem
263	34. The immersion problem for $\mathbb{R}P^n$
274	35. The sums-of-squares problem and beyond
284	Part 6. Homological intersection theory
284	36. The theorem of Gillet-Soulé
284	Part 7. Appendices
284	Appendix A. Bernoulli numbers
287	Appendix B. The algebra of symmetric functions
289	Appendix C. Homotopically compact pairs
291	References
