

MTH 309T LINEAR ALGEBRA

EXAM 1

October 3, 2019

Name:

Kyle Williams

UB Person Number:

5	0	1	8	8	7	3	0
0	0	0	0	0	0	0	0
1	1	1	1	1	1	1	1
2	2	2	2	2	2	2	2
3	3	3	3	3	3	3	3
4	4	4	4	4	4	4	4
5	5	5	5	5	5	5	5
6	6	6	6	6	6	6	6
7	7	7	7	7	7	7	7
8	8	8	8	8	8	8	8
9	9	9	9	9	9	9	9

Instructions:

- Textbooks, calculators and any other electronic devices are not permitted. You may use one sheet of notes.
- For full credit solve each problem fully, showing all relevant work.

GRADE

1. (20 points) Consider the following vectors in \mathbb{R}^3 :

$$v_1 = \begin{bmatrix} 1 \\ 0 \\ 2 \end{bmatrix}, \quad v_2 = \begin{bmatrix} -1 \\ 1 \\ -3 \end{bmatrix}, \quad v_3 = \begin{bmatrix} 1 \\ 2 \\ 0 \end{bmatrix}, \quad w = \begin{bmatrix} -2 \\ 2 \\ b \end{bmatrix}$$

a) Find all values of b such that $w \in \text{Span}(v_1, v_2, v_3)$.

b) Is the set $\{v_1, v_2, v_3\}$ linearly independent? Justify your answer.

a) If: $w = 2v_2$, $b = -6$
 $w = v_1 + v_3$, $b = 2$
 $w = 3v_1 + 2v_2$, $b = 0$

b) The set is not linearly independent because there is a linear combination of vectors v_1 and v_2 which give v_3 .

$$3v_1 + 2v_2 = v_3$$

$$3 \begin{bmatrix} 1 \\ 0 \\ 2 \end{bmatrix} + 2 \begin{bmatrix} -1 \\ 1 \\ -3 \end{bmatrix} = \begin{bmatrix} 1 \\ 2 \\ 0 \end{bmatrix}$$

$$\begin{bmatrix} 3 \\ 0 \\ 6 \end{bmatrix} + \begin{bmatrix} -2 \\ 2 \\ -6 \end{bmatrix} = \begin{bmatrix} 1 \\ 2 \\ 0 \end{bmatrix} = v_3$$

2. (10 points) Consider the following matrix:

$$A = \begin{bmatrix} 1 & -1 & 2 \\ 1 & 0 & 1 \\ 0 & 2 & -1 \end{bmatrix}$$

Compute A^{-1} .

First, append Identity matrix, I , then find $\text{red}(A)$

$$\left[\begin{array}{ccc|ccc} 1 & -1 & 2 & 1 & 0 & 0 \\ 1 & 0 & 1 & 0 & 1 & 0 \\ 0 & 2 & -1 & 0 & 0 & 1 \end{array} \right] \xrightarrow{R_2 \leftrightarrow R_3} \left[\begin{array}{ccc|ccc} 1 & -1 & 2 & 1 & 0 & 0 \\ 0 & 2 & -1 & 0 & 0 & 1 \\ 1 & 0 & 1 & 0 & 1 & 0 \end{array} \right] \xrightarrow{R_2 \leftrightarrow R_1} \left[\begin{array}{ccc|ccc} 1 & 2 & -1 & 0 & 0 & 1 \\ 1 & -1 & 2 & 1 & 0 & 0 \\ 0 & 2 & -1 & 0 & 0 & 1 \end{array} \right]$$

$$\xleftarrow{R_2 - R_3} \left[\begin{array}{ccc|ccc} 1 & -1 & 2 & 1 & 0 & 0 \\ 0 & 1 & 0 & 1 & -1 & 1 \\ 0 & 2 & -1 & 0 & 0 & 1 \end{array} \right] \xrightarrow{R_3 - R_1} \left[\begin{array}{ccc|ccc} 1 & -1 & 2 & 1 & 0 & 0 \\ 0 & 1 & 0 & 1 & -1 & 1 \\ 0 & 1 & -1 & -1 & 0 & 1 \end{array} \right] \xrightarrow{R_3 - R_2} \left[\begin{array}{ccc|ccc} 1 & -1 & 2 & 1 & 0 & 0 \\ 0 & 1 & 0 & 1 & -1 & 1 \\ 0 & 0 & -1 & -2 & 1 & 0 \end{array} \right]$$

$$\xleftarrow{R_1 + R_2, (-1)R_3} \left[\begin{array}{ccc|ccc} 1 & 0 & 2 & 2 & -1 & 1 \\ 0 & 1 & 0 & 1 & -1 & 1 \\ 0 & 0 & 1 & 2 & -2 & 0 \end{array} \right] \xrightarrow{R_1 - 2R_3} \left[\begin{array}{ccc|ccc} 1 & 0 & 0 & -2 & 3 & 1 \\ 0 & 1 & 0 & 1 & -1 & 1 \\ 0 & 0 & 1 & 2 & -2 & 0 \end{array} \right]$$

$$\left[\begin{array}{ccc} 1 & -1 & 2 \\ 1 & 0 & 1 \\ 0 & 2 & 1 \end{array} \right] \left[\begin{array}{ccc} -2 & 3 & -1 \\ 1 & -1 & 1 \\ 2 & -2 & 1 \end{array} \right] = \left[\begin{array}{ccc} 1 & 0 & 0 \\ 0 & 1 & 0 \\ 0 & 0 & 1 \end{array} \right] \quad \checkmark$$

$$A^{-1} = \begin{bmatrix} -2 & 3 & -1 \\ 1 & -1 & 1 \\ 2 & -2 & 1 \end{bmatrix}$$

3. (10 points) Let A be the same matrix as in Problem 2, and let

$$B = \begin{bmatrix} 1 & 2 & 3 \\ 4 & 5 & 4 \\ 3 & 2 & 1 \end{bmatrix}$$

Find a matrix C such that $A^T C = B$ (where A^T is the transpose of A).

$$A = \begin{bmatrix} 1 & -1 & 2 \\ 1 & 0 & 1 \\ 0 & 2 & -1 \end{bmatrix} \rightarrow A^T = \begin{bmatrix} 1 & 1 & 0 \\ -1 & 0 & 2 \\ 2 & 1 & -1 \end{bmatrix}$$

$$C_1 = \begin{bmatrix} x_1 \\ x_2 \\ x_3 \end{bmatrix} \rightarrow \begin{bmatrix} 1 & 1 & 0 \\ -1 & 0 & 2 \\ 2 & 1 & -1 \end{bmatrix} \begin{bmatrix} x_1 \\ x_2 \\ x_3 \end{bmatrix} = \begin{bmatrix} 1 \\ 4 \\ 3 \end{bmatrix}$$

$$\begin{aligned} x_1 + x_2 + 0x_3 &= 1 \\ -x_1 + 0x_2 + 2x_3 &= 4 \\ 2x_1 + x_2 - x_3 &= 3 \end{aligned}$$

$$-x_1 + x_3 = -2$$

$$\rightarrow -x_1 + 2x_3 = 4$$

$$x_3 = 6 \therefore x_1 = 8 \text{ and } x_2 = -7$$

$$C_1 = \begin{bmatrix} 8 \\ -7 \\ 6 \end{bmatrix}$$

$$C_2 = \begin{bmatrix} x_1 \\ x_2 \\ x_3 \end{bmatrix} \rightarrow \begin{bmatrix} 1 & 1 & 0 \\ -1 & 0 & 2 \\ 2 & 1 & -1 \end{bmatrix} \begin{bmatrix} x_1 \\ x_2 \\ x_3 \end{bmatrix} = \begin{bmatrix} 2 \\ 5 \\ 2 \end{bmatrix}$$

$$\begin{aligned} x_1 + x_2 + 0x_3 &= 2 \\ -x_1 + 0x_2 + 2x_3 &= 5 \\ 2x_1 + x_2 - x_3 &= 2 \end{aligned}$$

$$\begin{aligned} -x_1 + x_3 &= 0 & x_1 = x_3 = 5 \\ -x_1 + 2x_3 &= 5 & \therefore x_2 = -3 \end{aligned}$$

$$C_2 = \begin{bmatrix} 5 \\ -3 \\ 5 \end{bmatrix}$$

$$C_3 = \begin{bmatrix} x_1 \\ x_2 \\ x_3 \end{bmatrix} \rightarrow \begin{bmatrix} 1 & 1 & 0 \\ -1 & 0 & 2 \\ 2 & 1 & -1 \end{bmatrix} \begin{bmatrix} x_1 \\ x_2 \\ x_3 \end{bmatrix} = \begin{bmatrix} 3 \\ 4 \\ 1 \end{bmatrix}$$

$$\begin{aligned} x_1 + x_2 + 0x_3 &= 3 \\ -x_1 + 0x_2 + 2x_3 &= 4 \\ 2x_1 + x_2 - x_3 &= 1 \end{aligned}$$

$$\begin{aligned} -x_1 + x_3 &= 2 & x_3 = 2 \\ -x_1 + 2x_3 &= 4 & \text{and } x_1 = 4 \\ & & \therefore x_2 = -1 \end{aligned}$$

$$C_3 = \begin{bmatrix} 4 \\ -1 \\ 2 \end{bmatrix}$$

$$\therefore C = \begin{bmatrix} 8 & 5 & 4 \\ -7 & -3 & -1 \\ 6 & 5 & 2 \end{bmatrix}$$

4. (20 points) Let $T: \mathbb{R}^2 \rightarrow \mathbb{R}^3$ be a linear transformation given by

$$T\left(\begin{bmatrix} x_1 \\ x_2 \end{bmatrix}\right) = \begin{bmatrix} x_1 - 2x_2 \\ x_1 + x_2 \\ x_1 - 3x_2 \end{bmatrix}$$

a) Find the standard matrix of T .

b) Find all vectors u satisfying $T(u) = \begin{bmatrix} 1 \\ 10 \\ -2 \end{bmatrix}$.

a) $T = \begin{bmatrix} 1 & -2 \\ 1 & 1 \\ 1 & -3 \end{bmatrix}$

b) $u = \begin{bmatrix} x_1 \\ x_2 \end{bmatrix} \rightarrow \begin{bmatrix} 1 & -2 \\ 1 & 1 \\ 1 & -3 \end{bmatrix} \begin{bmatrix} x_1 \\ x_2 \end{bmatrix} = \begin{bmatrix} 1 \\ 10 \\ -2 \end{bmatrix}$

$$\begin{aligned} x_1 - x_2 &= 1 \\ x_1 + x_2 &= 10 \\ x_1 - 3x_2 &= -2 \end{aligned} \rightarrow \begin{aligned} 2x_1 &= 11 \rightarrow x_1 = 4.5 \text{ or } 9/2 \\ 9/2 - 3x_2 &= -2 \\ -3x_2 &= -13/2 \\ x_2 &= 13/6 \end{aligned}$$

But $9/2 - 13/6 \neq 10$

\therefore There are no vectors, u , which satisfy $T(u) = \begin{bmatrix} 1 \\ 10 \\ -2 \end{bmatrix}$

5. (20 points) For each matrix A given below determine if the matrix transformation $T_A: \mathbb{R}^3 \rightarrow \mathbb{R}^3$ given by $T_A(v) = Av$ is one-to-one or not. If T_A is not one-to-one, find two vectors v_1 and v_2 such that $T_A(v_1) = T_A(v_2)$.

a) $A = \begin{bmatrix} 1 & 1 & 0 \\ 0 & 2 & 4 \\ 3 & 4 & 4 \end{bmatrix}$

$\downarrow R_3 - 3R_1$

$$\begin{bmatrix} 1 & 1 & 0 \\ 0 & 2 & 4 \\ 0 & 1 & 4 \end{bmatrix}$$

$\downarrow R_3 \leftrightarrow R_2$

$$\begin{bmatrix} 1 & 1 & 0 \\ 0 & 1 & 4 \\ 0 & 2 & 4 \end{bmatrix}$$

$\downarrow R_3 - 2R_2$

$$\begin{bmatrix} 1 & 1 & 0 \\ 0 & 1 & 4 \\ 0 & 0 & -4 \end{bmatrix}$$

This is not one to one because there is not a pivot in every column

$$v_1 = \begin{bmatrix} \\ \\ \end{bmatrix}$$

$$v_2 = \begin{bmatrix} \\ \\ \end{bmatrix}$$

b) $A = \begin{bmatrix} 1 & 1 & 0 \\ 0 & 2 & 4 \\ 3 & 4 & 2 \end{bmatrix}$

$\downarrow R_3 - 3R_1$

$$\begin{bmatrix} 1 & 1 & 0 \\ 0 & 2 & 4 \\ 0 & 1 & 2 \end{bmatrix}$$

$\downarrow R_2 \leftrightarrow R_3$

$$\begin{bmatrix} 1 & 1 & 0 \\ 0 & 1 & 2 \\ 0 & 2 & 4 \end{bmatrix}$$

$\downarrow R_3 - 2R_2$

$$\begin{bmatrix} 1 & 1 & 0 \\ 0 & 1 & 2 \\ 0 & 0 & 0 \end{bmatrix}$$

This is not one to one because there is not a pivot in every column

$$v_1 = \begin{bmatrix} 3 \\ 1 \\ 3 \end{bmatrix}$$

$$v_2 = \begin{bmatrix} 1 \\ 3 \\ 1 \end{bmatrix}$$

6. (10 points) For each of the statements given below decide if it is true or false. If it is true explain why. If it is false give a counterexample.

a) If u, v, w are vectors in \mathbb{R}^3 such that $w + u \in \text{Span}(u, v)$ then $w \in \text{Span}(u, v)$.

True; If there is a linear combination of vectors v and u that equal $w + u$, w must be in the span of u and v . Since addition and subtraction of one vector from another is a linear operator, the problem can be considered as the following:

$$w = (w + u) - u \therefore \text{If } w + u = x_1 v + x_2 u, \text{ then } w = x_1 v + (x_2 - 1)u,$$

which is a linear combination of u and $v \therefore w \in \text{Span}(u, v)$

b) If u, v, w are vectors in \mathbb{R}^3 such that the set $\{u, v, w\}$ is linearly independent then the set $\{u, v\}$ must be linearly independent.

True, any subset of a linearly independent set of vectors must also be linearly independent

7. (10 points) For each of the statements given below decide if it is true or false. If it is true explain why. If it is false give a counterexample.

a) If A is a 2×2 matrix and u, v are vectors in \mathbb{R}^2 such that Au, Av are linearly dependent then u, v also must be linearly dependent.

False; Linear dependence/independence is only guaranteed to be preserved if A is a matrix which defines a linear transformation. Since this condition is not specified, then linear dependence cannot be guaranteed after transformation.

b) If $T: \mathbb{R}^2 \rightarrow \mathbb{R}^2$ is a linear transformation and $u, v, w \in \mathbb{R}^2$ are vectors such that u is in $\text{Span}(v, w)$ then $T(u)$ must be in $\text{Span}(T(v), T(w))$.

True; Since T is a linear operator whose operation preserves the dimensions of the original vectors, then any vector $u \in \text{Span}(v, w)$ must be in the span of $T(v), T(w)$. Additionally, since there are 3 vectors in 2 spaces, and it is known that $u \in \text{Span}(v, w)$, v and w either are linearly dependent on one another, and u , or are linearly independent. Since T is a linear transformation, these properties are maintained, meaning $T(u) \in \text{Span } T(v), T(w)$ by definition (3 vectors in 2 spaces, 2 are linearly independent; v and w) or because all 3 vectors were linearly dependent to begin with.
