

5. For each of the statements given below decide if it is true or false. If it is true explain why. If it is false give a counterexample.

a) If  $A$  is a  $2 \times 2$  matrix and  $v$  is an eigenvector of  $A$  corresponding to an eigenvalue  $\lambda$  then  $2v$  is an eigenvector of  $A$  corresponding to the eigenvalue  $2\lambda$ .

b) If  $V$  is a subspace of  $\mathbb{R}^2$  and  $w$  is a vector such that  $\text{proj}_V w = -w$  then  $w$  must be the zero vector.

c) If  $A$  is a square matrix which is both symmetric and orthogonal then  $A^2$  is the identity matrix.

d) If  $A$  and  $B$  are  $2 \times 2$  matrices which are both orthogonally diagonalizable, then the matrix  $A + B$  is also orthogonally diagonalizable.

a) False, just because there is an eigenvalue  $\lambda$  does not mean there is an eigenvalue  $2\lambda$ . There is no guarantee  $2\lambda = \text{val}$  is another solution to  $|A - I(\text{val})| = 0$ . Ex)  $A = \begin{bmatrix} 1 & 0 \\ 0 & -1 \end{bmatrix}$   $\lambda_1 = 1$   $\lambda_2 = -1$

b)  $\begin{bmatrix} v_{11} \\ v_{21} \end{bmatrix} \cdot \frac{w_1 v_{11} + w_2 v_{21}}{\sqrt{v_{11}^2 + v_{21}^2}} = \frac{w_1 v_{11} + w_2 v_{21}}{\sqrt{v_{11}^2 + v_{21}^2}} \begin{bmatrix} v_{11} \\ v_{21} \end{bmatrix} = \begin{bmatrix} -w_1 \\ -w_2 \end{bmatrix}$  Say  $w_1 = w_2 = 1$

$\begin{bmatrix} w_1 + w_1 \\ w_1 + w_2 \end{bmatrix} = \begin{bmatrix} w_1 + w_2 \\ w_1 + w_2 \end{bmatrix}$   $w = \begin{bmatrix} w_1 \\ w_2 \end{bmatrix}$

True, the projection of a vector on some space can be visualized as the "shadow" of that vector on that space,  $\therefore$  any projection of  $w_1, w_2$  somewhere else should carry the same sign, unless they both are zero.

c) False,  $A = \begin{bmatrix} 2 & 1 \\ 1 & 1 \end{bmatrix}$   $A = A^T \checkmark$   $A^2 = \begin{bmatrix} 5 & 3 \\ 3 & 2 \end{bmatrix} \neq \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix}$  Symmetric  $\checkmark$

d) False,  $A = \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix}$   $B = \begin{bmatrix} 1 & 0 \\ 0 & -1 \end{bmatrix}$   $A+B = \begin{bmatrix} 1 & 0 \\ 0 & 0 \end{bmatrix}$

does not have 2 linearly independent eigenvectors
