- 6. (10 points) For each of the statements given below decide if it is true or false. If it is true explain why. If it is false give a counterexample.
- a) If u, v, w are vectors in \mathbb{R}^3 such that $w + u \in Span(u, v)$ then $w \in Span(u, v)$.

$$U = \begin{bmatrix} 0 \\ 0 \end{bmatrix}$$

WXCU, so WXSpon(u,v)

b) If u, v, w are vectors in \mathbb{R}^3 such that the set $\{u, v, w\}$ is linearly independent then the set $\{u, v\}$ must be linearly independent.

True, If set, {u,v,w} are independent, that meens U * CV, U * CW, V * CW, W * CW, W * CW, W * CV. V Show linear independence between u and v.

7. (10 points) For each of the statements given below decide if it is true or false. If it is true explain why. If it is false give a counterexample.

a) If A is a 2×2 matrix and u, v are vectors in \mathbb{R}^2 such that Au, Av are linearly dependent then u, v also must be linearly dependent.

Twee of the and Av are meetly dependent. then Auzich, Therefore uzev, so u and

v must be linearly dependent.

take $u = \begin{bmatrix} 1 \\ 0 \end{bmatrix}$, $v = \begin{bmatrix} 1 \\ 1 \end{bmatrix}$, $A = \begin{bmatrix} 1 & 2 \\ 1 & 2 \end{bmatrix}$

Au= [1], Av = [2], so Au = c Av but

b) If $T: \mathbb{R}^2 \to \mathbb{R}^2$ is a linear transformation and $u, v, w \in \mathbb{R}^2$ are vectors such that u is in Span(v, w) then T(u) must be in Span(T(v), T(w)).

True. If UESpan(v, w) then UZCV OF UZCW. If your take Ttu), you get Aout Accv, which shows TWIE Spen (T()), I (w)) U - 0
