- 6. (10 points) For each of the statements given below decide if it is true or false. If it is true explain why. If it is false give a counterexample.
- a) If u, v, w are vectors in  $\mathbb{R}^3$  such that  $w + u \in \text{Span}(u, v)$  then  $w \in \text{Span}(u, v)$ .

folse who can be in the span of u, u
but we has no correlation with
the span of u, v since w is added
to u.

b) If u, v, w are vectors in  $\mathbb{R}^3$  such that the set  $\{u, v, w\}$  is linearly independent then the set  $\{u, v\}$  must be linearly independent.

True since {v,v, w} in 183 are all vectors
with leading ones and in row reduced e form
to be linearly independent, also to be linearly independent
u,v, w cannot be multiples of each other so
{u,v, w cannot be multiples of each other so
{u,v} must be linearly independent because
they are not multiples of each other as proven
by {v,v,w} linear independence

b) If  $T:\mathbb{R}^2\to\mathbb{R}^2$  is a linear transformation and  $u,v,w\in\mathbb{R}^2$  are vectors such that u is in Span(v, w) then T(u) must be in Span(T(v), T(w)).

The since T(u) the M is a vector in  $\mathbb{R}^2$ .

The most be in the span of T(u), T(u).
