6. (10 points) For each of the statements given below decide if it is true or false. If it is true explain why. If it is false give a counterexample.

a) If u, v, w are vectors in R3 such that w + u \in Span(u, v) then w \in Span(u, v).

True Since u \in span(u, v)

for u + w \in span(u, v) w would have to
be some combination of cu + dv where chd are

some constants.

Therefore w \in Span(u, v)

7. (10 points) For each of the statements given below decide if it is true or false. If it is true explain why. If it is false give a counterexample.

a) If A is a  $2 \times 2$  matrix and u, v are vectors in  $\mathbb{R}^2$  such that Au, Av are linearly dependent then u, v also must be linearly dependent.

False Counter example: A= [0 0] 4= [7] V = [4]

Ay & Av : both = [0] which is linearly dependent but u and v ore not linearly dependent

b) If  $T\colon \mathbb{R}^2 \to \mathbb{R}^2$  is a linear transformation and  $u,v,w\in \mathbb{R}^2$  are vectors such that u is in Span(v, w) then T(u) must be in Span(T(v), T(w)).

If u is in Span (v, w) it is a combination of cut dw where c and d are some constants

So T(u) = T(cv + dw) = T(cv) + T(dw) = cT(v) + dT(w)Which means that T(u) is a combination or a T(u) & T(w) which is what it means to be in Span(ta)
